- 218. Larus franklini. Franklin's Gull.--Abundant during migration, remaining here for nearly three weeks, feeding in the newly plowed fields.
- 219. Sterna forsteri. Forster's Tern.-- Common migrant; may yet be found breeding here.
  - 220. Sterna antillarum. LEAST TERN. -- Summer resident; breeds.
- 221. Hydrochelidon surinamensis. BLACK TERN.— Common summer resident: breeds.
- 222. Colymbus torquatus. Loon.-- Very rare; only seen a few times in the fall.
  - 223. Dytes auritus. HORNED GREBE .-- Rare in spring and fall.
- 224. Dytes nigricollis californicus. Eared Grebe.— A not very common summer resident; breeds.
- 225. Podilymbus podiceps. Thick-billed Grebe.-- Common in summer; breeds.

[Addendum.—Passerina cyanea. Indigo Bunting.—Mr. Agersborg writes me that this species is a not common summer resident; breeds.—W. W. C.]

## RECENT LITERATURE.

Nests and Eggs of the Birds of Ohio.—Part XX of this magnificent work, dated April, 1885, contains plates lviii-lx. The first is a beautiful one of the nest of the Wood Thrush, the others give forty-one figures of the eggs of various species, without the nests. A notice accompanying states that three more parts, or twenty-three in all, will complete the work, which it is expected will be finished by next January, the remaining plates being nearly all done. The whole volume will then contain 69 plates, figuring about the same number of nests, the eggs of 127 species, with some 400 pages of letter-press. We have often, in tracing the course of this publication, spoken\* of its great merit, and can recommend it without reserve. It forms the proper continuation of 'Audubon,' and is the only work America has produced of that character, excepting Mr. D. G. Elliot's.—E. C.

Willard on Birds of Brown and Outagamie Counties, Wisconsin.†—This paper "gives a systematic series of facts from which the generalizations of Messrs. Baird and Allen may be again applied." The 210 species enumerated are arranged in six classes, "based upon their migratory habits
